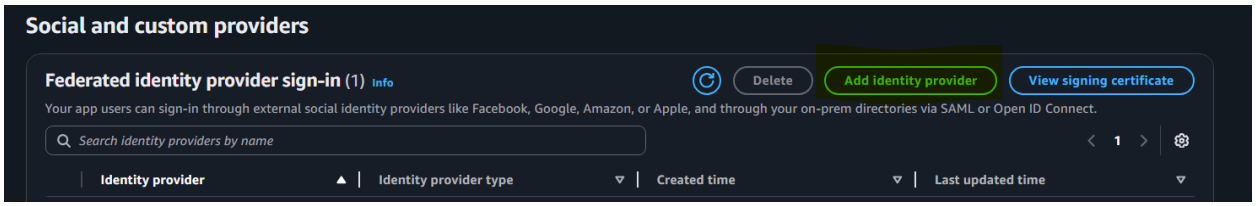
2 Introduction

Document Name	Modelops User Pool SSO Configuration
Description	This guide demonstrates how to setup SSO with user pool in Modelops and associate it with the Azure AD
Owner	Ashwini Dhanakshirur
Version	0.1
Version Date	08/12/2025

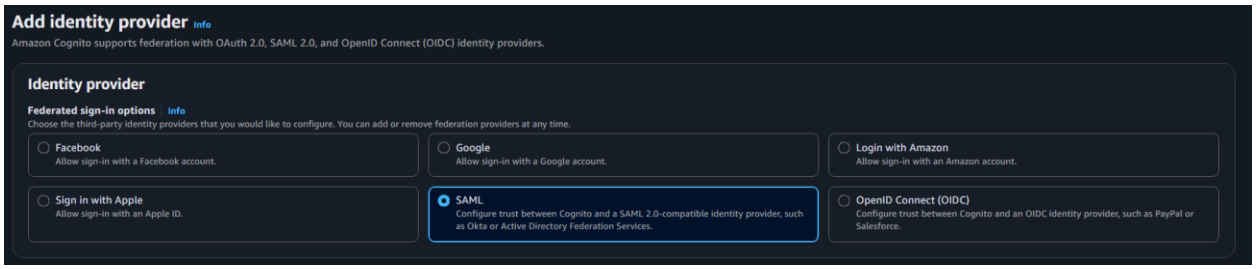
3 Modelops SSO App client Creation

This process setups a SSO appclient and connects with azure ad:

1. Navigate to Social and external providers from left navigation bar and click Add identity provider button as shown in image to create (External IDP Identity Provider)



Select SAML option



MAXIMUS Internal Use Only

Hardcopies of this document can be printed for immediate use only and should not be kept or stored for future use.

2. Update Provider name, configure SAML options, paste metadata document endpoint URL from Azure App which will be created initially, refer to the below images

- 
- See appendix section to copy the metadata document endpoint URL

- Map attribute between Microsoft IDP and Modelops User pool using Add another attribute button and select email from dropdown for which mention **emailaddress** as SAML attribute

- 
- Click on Add identity Provider which will create your Identity provider
- Email: will be fetched from Attributes & claims in Azure AD
